

Pediatric Endocrinology Associates

Continuous Glucose Monitoring

For our patients with Diabetes:

PEA offers the use of a Glucose Monitoring device that provides the Doctor with **3 to 7 consecutive days** of continuous glucose monitoring. This technology gives us a much more complete view of blood sugar trends when compared to traditional finger testing. This process can be used to help adjust insulin doses and achieve tighter blood sugar control.

There may be a charge for the sensor, and a pre-authorization will have to be requested from your Insurance prior to placing the sensor.

Please let us know if you are interested.
